Abhishek Bhardwaj

New Delhi, India | +91 9711679748 | abhishekbhardwaj2413@gmail.com | linkedin.com/in/abhishek-bhardwaj | github.com/Abhishxk04

Education

Vellore Institute of Technology — Bhopal, India
Bachelor of Technology in Computer Science and Engineering (CGPA: 8.02 / 10) — *Aug 2022 – May 2026*

Professional Experience

Data Engineering & Automation Trainee (AI + Backend Focus) — Remote
LabelNest — *Jan 2026 – March 2026*

- Engineered scalable **Python-based data pipelines** for validation and preprocessing, improving data reliability by **30%** across production workflows.
- Automated ingestion and transformation pipelines, eliminating manual intervention and saving **15+ hours/week**.
- Optimized REST API integrations and resolved schema inconsistencies, reducing payload failures by **40%**.
- Diagnosed and resolved production-level bottlenecks using logs and stack traces, improving system uptime by **25%**.
- Worked in Linux environments to manage background jobs and optimize resource utilization for backend services.
- Collaborated via Git-based workflows and contributed to code reviews, improving delivery speed and maintainability.
- Built a strong foundation in **backend systems, API design, and data engineering workflows**, aligning with full-stack AI system requirements.

Projects

Mental Health Chat Bot | ***FastAPI, Vector DB, LLM*** **[GitHub]** — Nov 2025 – Dec 2025

- Designed and deployed a **Retrieval-Augmented Generation (RAG)** system integrating vector search with LLM-based response generation.
- Implemented **embedding-based semantic retrieval** using Hugging Face models and Qdrant vector database.
- Built asynchronous FastAPI backend enabling **low-latency responses (¡1s)** for real-time queries.
- Developed safety guardrails using similarity thresholds and contextual filtering, improving response reliability in sensitive use-cases.
- Handled concurrent requests efficiently, scaling to **50+ simultaneous users**.

AI-powered Data Scraper & Processing Pipeline | ***Python, Selenium, ETL*** **[GitHub]** — Sep 2025 – Oct 2025

- Developed an automated scraping system to extract dynamic web content and convert it into structured datasets.
- Handled dynamic DOM rendering and asynchronous loading, achieving **100% data capture accuracy**.
- Integrated retry logic, error handling, and timeout mechanisms, improving pipeline success rate by **35%**.
- Transformed unstructured HTML data into clean JSON/CSV formats for downstream analytics and ML workflows.
- Designed modular architecture enabling quick adaptation to new data sources with minimal code changes.

Technical Skills

Languages: Python, SQL

AI & LLM: RAG Systems, Vector Search, Hugging Face, Prompt Engineering

Backend: FastAPI, REST APIs, Async Programming

Databases: MongoDB, PostgreSQL, Vector DBs (Qdrant)

Data Engineering: ETL Pipelines, Data Validation, Web Scraping

Tools & Systems: Docker, Linux, Git, GitHub

Core CS: DSA, OOP, DBMS, OS

Certifications

- Oracle **Generative AI Professional**
- Oracle **Data Science Professional**
- The Bits and Bytes of Computer Engineering — Coursera
